

RESTful API

This documentation helps you implement the RESTful MyOperator API. This API uses a JSON format for output. The API is stateless – all requests are validated against an API token. The API token can be obtained manually from the MyOperator app.

MyOperator API token

It is very simple to get an authentication token. Login to your MyOperator panel. Go to **Manage -> API integration -> Public API token**

URL Naming

The API uses a straight-forward URL naming convention. Each request must be made to the API endpoint (<https://developers.myoperator.co>). API token must be provided as part of the query string for all requests, using the 'token' variable, e.g. <https://developers.myoperator.co?token=tS5adsXC6V2nH991>

Response Format

Each response sent from the API made in json format contains the 'status' and status response parameters.

When the 'status' is 'success', the status response parameters contain the 'code' and an array of data, if request is POST or GET. The status response parameter contains the success message if it is a PUT request.

In case the 'status' is 'error', the response always contains the error 'code' and 'message' in the status response parameter.

The API description and live testing

▼ Logs

Access or search logs

POST

Description

Get the list of your logs. You can query, search & filter to get appropriate logs.

Url

<https://developers.myoperator.co/search>

Parameters

Name	Value	Description	Type	Required
token	3f7657f565e574d0bc	Unique MyOperator API token issued to the user who is accessing API.	string	Yes
from		Date from when you would like to access logs. Date should be in UTC format(unix timestamp).	string	No
to		Date upto when you would like to access logs. Date should be in UTC format(unix timestamp).	string	No
log_from		From which the logs need to be fetched, defaults to 0 (used for pagination)	string	No
page_size		Number of logs you want to access(defaults to 20). Max request limit is 100.	string	No
search_key		Words you want to search for (accepts: Name, Email, Phone number, Comments, Unique id, Caller name)	string	No

Name	Value	Description	Type	Required
filters		Filter IDs (from filters API) related with logical operators (AND, OR)	string	No
Try It!

```

Example for framing filters :

If you need to filter for all incoming missed calls,

Step 1 : Get List of filter from filters API.

Step 2 : fetch appropriate ids for the filter names (incoming - 5, missed - 13, call - 8)

Step 3 : Relate ids with logical operators (AND, OR only) - '5 AND 13 AND 8'

Step 4 : Place it against filters key in input - filters = '5 AND 13 AND 8'

▼ Log Filter List of log filters

GET

Description Get the list of keywords used to filter your logs.

Url <https://developers.myoperator.co/filters>

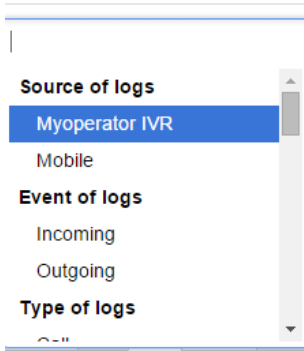

Parameters

Name	Value	Description	Type	Required
token		Unique MyOperator API token issued to the user who is accessing API.	string	Yes
Try It!				

Note

- parent_id = 0, denotes that it is a type of filter but the filter itself (please find the picture)
- In the below Image (replicates the filters response array), Source of Logs, Event of Logs & Type of Logs are embedded in the array and given with parent_id = 0.
- In order to pass the filters to access logs, you need to pick filters which are only with parent is not equals to 0.
- From below image, if you try to select filters incoming & outgoing, you need to relate them with OR operator (as parent id is same for those filters, use OR)
- From below image, if you try to select Mobile & incoming, you need to relate them with AND operator (as parent id is different for those filters, use AND)

Keyword

✓ User Fetch list of users

GET

Description List of users with search functionality

Url <https://developers.myoperator.co/user>

Parameters

Name	Value	Description	Required	type
token		Unique MyOperator API token issued to the user who is accessing API.	Yes	string

✓ User Add a user

POST

Description Add a User to the panel using this API.

Url <https://developers.myoperator.co/user>

Parameters

Name	Located in	Description	Required	Schema
token		Unique MyOperator API token issued to the user who is accessing API.	Yes	string
name		User's name.	Yes	string
contact_number		Primary contact number of the user (without leading country code).	Yes	string
country_code		Country code of the primary contact number of the User(do not mistake it for state code)	Yes	string
extension		Extension number for the user (usually between 11 to 99, should be a number not assigned as an extension to another User).	Yes	number
email		Email of the user.	No	string
alternate_contact_number		Alternate contact number of the user if available (without leading country code).	No	number
alternate_cc		Country code for alternate number (required only if alternate contact number exists).	No	string
panel_access		1: User will be able to access MyOperator panel and view his/her logs. 2: User will not be able to login. (defaults to 1)	No	number
receive_calls		1: User will receive IVR calls on contact_number. 2: User will not receive any calls. (defaults to 1)	No	number
contact_type		Mobile / SIP / Landline. (defaults to mobile)	No	string
Try It!				

Note :

- User will be able to add other users based on the permissions defined on his role. SuperAdmin (id = 1) & Admin (id = 2) will be able to add users by default.
- Extension should be a unique integer value
- Contact number should be unique in your company. How ever it can be assigned as an alternate number of other users and a verification will be triggered from MyOperator.
- alternate_cc is a required field only with alternate_contact_number
